

One real candidate list: mention "Famotidine" (BC5CDR, pmid 8701013)

The concepts swap places. The scores do not.

BEFORE (p = 0)

retriever is right: gold on rank 1

rank	concept	score
1	D015738 famotidine	219.58
2	C023990 tiotidine	178.06
3	C081969 faman	171.26
4	D011899 ranitidine	169.75
5	C041784 ramixotidine	169.63
6	C520153 cimicifugadine	169.28
7	C043465 icotidine	166.91
8	D0000775 famciclovir	165.46
9	C113351 alpha fampaamidine	165.06
10	C116092 cimicifugic acid d	163.19

AFTER (this mention degraded)

retriever is now wrong: gold pushed to rank 4

rank	concept	score
1	D011899 ranitidine	219.58
2	C023990 tiotidine	178.06
3	C081969 faman	171.26
4	D015738 famotidine	169.75
5	C041784 ramixotidine	169.63
6	C520153 cimicifugadine	169.28
7	C043465 icotidine	166.91
8	D0000775 famciclovir	165.46
9	C113351 alpha fampaamidine	165.06
10	C116092 cimicifugic acid d	163.19

p is the fraction of mentions this is done to: p = 0 leaves everything as it is, p = 0.5 degrades half of them.

same 10 concepts

gold still in the list

R@10 = 90.5 unchanged

same score vector

top1 - top2 = 41.52 either way

the LLM sees the same confidence signal

one thing moves

which concept is on top

R@1 falls
